Collaboration,
Ubiquity and Mobility

Date: 11 October, 2008 Time: 14:00-17:00

Open Source Backbone for Web 2.0 (Featuring GlassFish, MySQL & Open Solaris)

Mr. Mickey Fan

Sun has always believed in the power of collaboration and sharing. Not only do we contribute software to the open source community, we also help packaging and promoting open source in business. The open source model offers an entirely new way for developers and increasingly knowledgeable, interactive users to collaborate and build upon the best of the commons. We believe that this is one of the foundations for Web 2.0. The speaker will share with you open source adoption for web 2.0 especially focused on several open source projects, namely, GlassFish, MySQL and OpenSolaris.

Speaker bios:

Mr. Mickey Fan has been working in the I.T. industry for over eighteen years. During this period, he has concentrated on management, technology evangelism, application development and consulting. Currently, he is working in Sun Microsystems and leading a team of 10 professionals focused on I.T. solution architecture in Hong Kong. He holds a bachelor degree of Science from the University of Hong Kong and Master of Business Administration from Chinese University of Hong Kong.
