Agile web development with Ruby and Rails

Charles Woo

In this workshop, agile development language will be introduced. Ruby and Ruby on Rails (RoR) are the new force to the web2.0 world. They provide a lot of web frameworks that could let the developers concentrate on the business layer. Attendees will be able to build their own blog or application after this workshop.

Audience:

Web developers and designers, and any individual interested in Web2.0 technology with basic programming sense

Key topics:

- ✓ Ruby language for desktop application development
- ✓ Framework and model in RoR
- ✓ Active Record technology in RoR
- ✓ Self-Application development using RoR

Speaker Bios:

Charles Woo is completing his Master degree in Computer Science and Engineering at The Chinese University of Hong Kong (CUHK). Mr. Woo has been serving the advanced web technology company since he was the undergraduate. He has worked in Web2.0 based companies, like Editgrid (Web2.0 Spreadsheet) and Gownfull (Web2.0 input method editor). He is actively involved in the ICT and education field. He was employed by the CUHK to reform their current departmental information system. Also, he has taught Ruby on Rails at the Hong Kong PolyU.
